A Formula sheet

1 Format and Verify a Currency String

E1.1 · Format two decimal places

```
price = 12
print(f"${price:.2f}")
```

gives	A currency-labelled display string.
applies	Python 3; this is display formatting and no exchange-rate conversion is implied.
units	Display text, not a currency conversion.

S1

B Symbol glossary

Symbol	Name	Meaning	Unit	Appears in
`price`	Input variable	The integer 12 in this example. S1	No conversion is performed	E1.1
`f` prefix	Formatted string literal	Evaluates expressions placed inside braces. S1	Python syntax	E1.1

Symbol	Name	Meaning	Unit	Appears in
`.2f`	Format specification	Displays two digits after the decimal point. S1	Python syntax	E1.1
