1 Format and Verify a Currency String

Definitions

F-string. A formatted string literal that evaluates expressions inside braces. S1

Format specification. Text after a colon in a replacement field that controls presentation. S1

Key points

1. The example formats the integer exactly; it does not claim that floating-point arithmetic is suitable for all financial calculations. S1

Why?

Does adding a dollar sign convert a number into another currency?
No. The symbol is a display label. Conversion requires an explicitly supplied exchange rate and a defined calculation.
